

Introduction

A clearer view of what GPT-5 is, who built it, and why it matters.

What is GPT-5?

Advanced OpenAI model for human-like language, reasoning, coding and information analysis — part of the Generative Pre-trained Transformer family.

Who created it?

Developed by OpenAI, an AI research and technology leader, as the successor to GPT-4 and GPT-4o.

Why it is important

A major step in complex reasoning and practical assistance across education, programming, research, writing and problem solving — strengthening human–AI collaboration.

New Features

Improved Reasoning

Handles complex, multi-step problems and adjusts effort to difficulty.

Better Coding

Writes, debugs and understands larger, more complex codebases.

More Accurate

Follows instructions more reliably, with fewer factual errors.

Multimodal

Combines text and image understanding for richer analysis.

Better Performance

Faster, more efficient, with reasoning depth matched to the task.

One model, calibrated to think harder only when the task demands it.

Benefits and Real-World Uses

01

Education

Personalised
tutoring • concept
support
Teacher lesson-
planning assistance

02

Healthcare

Medical information
summaries •
research and admin
support
Clearer patient-
facing explanations

03

Business

Email and
document
automation • data
analysis
Reports, service and
decision support

04

Software Development

Code writing,
explanation and
debugging
Faster
documentation and
testing

Value comes from augmenting expertise — not replacing judgement.

Challenges and Future

AI Mistakes

Incorrect or outdated answers remain possible.
Critical decisions require human review.

Privacy Concerns

Sensitive data demands strong safeguards,
governance and responsible handling.

Impact on Jobs

Some roles may be automated, while new AI-
related opportunities emerge.

FUTURE OF AI

**More capable. More embedded.
More accountable.**

Progress across industries will depend on safety, reliability
and responsible use — with humans remaining essential
supervisors.

DISCUSSION QUESTION

***“Will AI like GPT-5 create more
jobs than it replaces — and why?”***
